# Sycada - Your partner in Managed Mobility

Sycada is an internationally operating company with 15 years of experience in developing and managing mobility solutions for clients across industrial and service organizations. More than 500 satisfied clients make use of Sycada's services and more than 40.000 remote assets are equipped with Sycada's mobile technology.

***You can trust Sycada to deliver your complete mobile solution!***

- > Cross-European operations
- > 'Off-the-shelf' solutions as well as tailored development
- > Hosting, management and support performed by Sycada
- > Solution can be integrated with your existing systems
- > Robust and scalable infrastructure for safe and reliable mobile communications

Sycada offers you a range of different mobile solutions, including GPS tracking & tracing, Transport Management Systems, PDA-based applications for mobile professionals, and systems for remote control and management of machines and installations.

## What is Connected Navigation

Connected Navigation combines navigation, two-way communication between central users and drivers, and advanced track & trace into a single system. It fully integrates your mobile field force with the rest of your organisation. Connected Navigation allows you to improve efficiency, reduce operational costs, tighten control and strengthen customer service at the same time.

- > Smarter and less time consuming job dispatching
- > Improved field force efficiency
- > Shorter response times and better customer service
- > Reduced telecom costs
- > Less time on the road and reduced fuel bills
- > Transparency in use of vehicles and operational hours

# Connected Navigation features

## > Track & Trace

- > Your planners have online access to position data and job status information of vehicles and employees from any PC with Internet connection.
- > Vehicles can easily be organised into groups and the intelligent search function makes it easy to manage a large number of vehicles.
- > In addition, you can limit access to resources to specific users so that planners have access to relevant vehicle groups only. This makes the system extremely usable and efficient.

## > Two-way messaging

- > Messages can be forwarded to individual or multiple vehicles at the same time.
- > Standard message templates can be defined in the system to avoid re-keying of repetitive text messages by planners.
- > Drivers can send messages using standard message templates or by keying text manually using the electronic keyboard on the navigation device.

## > Job orders

- > Your planners can assign and dispatch job orders to vehicles based on status and position information.
- > The status of job orders is transparent to the planner and Estimated Time to Arrival (ETA) information is continuously transferred from the vehicle to the central system.

## > Easy navigation

- > Navigation by job order, with destination address pre-loaded, makes the driver's job a lot easier. Just activate the navigation destination and Garmin's state-of-the-art navigation software makes sure that your driver gets from A to B the optimal way.
- > A special navigation option for trucks and other heavy duty equipment is available for selected countries.

## > Complete reporting

- > All vehicle movements are accounted for and can be reported on. Sycada has extensive vehicle and driver reports defined for start/stop times and locations, operating hours etc. With our report generation wizard you can also generate your own report lay-out.
- > Logged data can be exported to other systems in various file formats. Insight has never been easier.

### Typical clients

Connected Navigation is for all companies with fleet sizes from 5 to 100+ vehicles, where real-time tracking is needed for operational planning and where frequent contact with drivers is required to do the job properly, including:

- > Service & Maintenance
- > Installation & inspection
- > Delivery & distribution
- > Safety & security
- > Transport & logistics

### Possible add-ons

The Connected Navigation solution is extendable. Possible add-ons include:

- > Time registration for driver and passengers
- > Trip type selector (private/business trips)
- > Centrally controlled vehicle immobiliser
- > Panic button

In addition, the system can be integrated with existing planning and/or administration systems.
